Subject: Notice of Completion of Factory Training Program

Reference: (a) Proposal dated 30 October 1956, [REDACTED]  
 (b) Telecom 21 November 1956, TLB to JMC [REDACTED]

Dear Sir:

The nine (9) week factory training program for Lot II Technicians was completed on Friday, 23 November 1956.

On this date, the schedule shown in the training outline furnished you as part of reference (a) was completed. Project Engineers, Senior Engineers, Field Service Engineers, and Production Personnel were utilized as instructors throughout the training course to insure optimum subject matter coverage.

Major equipment components such as cameras, magazines, mounts, etc. were used for classroom instruction. Lectures were supplemented by detailed color slides of components and complete configurations. One complete set of major assembly drawings was furnished to the group and each of the trainees was furnished with a personal notebook for filing of the schematics, outlines, information sheets, maintenance bulletins, blueprints, and other data furnished during the course of the program. The set of assembly drawings and notebooks are being retained by the factory and will be made available to the trainees at the Test Site location for use as permanent reference materials. As complete configurations became available to the Maintenance and Overhaul program in the adjoining plant facilities, the trainees were instructed in complete equipment inspection procedures and maintenance and overhaul problems and techniques.

It is understood that this training group will be assigned for approximately two (2) months to a test site to receive further training in field operations and maintenance of the equipment. It is further understood that the test site training will consist of pre-flight and post-flight checkout, installation, and trouble shooting of all equipment.

The group maintained a high level of interest throughout the training course and their cooperative attitude contributed to the success of the program.
